# **Network Video Recorder Quick Start Guide**

### 1. Notes

• Please read this instruction carefully for correct use of the product and preserve it for reference purposes.

• All the examples and pictures used here are for reference only.

• There may be several technically incorrect places or printing errors in this manual. The updates will be added into the new version of this manual. The contents of this manual are subject to change without notice.

• This device should be operated only from the type of power source indicated on the marking label. The voltage of the power must be verified before using the same.

## 2. HDD Installation

This series of the product supports 4 SATA hard drives. Please make sure that the device is powered off before the installation. The pictures of the installation are only for reference, please take the real object as the standard.

1 Loosen the screws to open the cover.

3 Turn over the machine and place the HDD with two screws onto the bottom of the case. Then lock the screws according to the order of the marks.

(5) Connect the power and data cables.

(2) Screw two screws into the holes of

(4) Install the other three HDDs according to above-mentioned method

6 Install the cover back and fix it.

Tips: Please check the inside structure of the device and make sure the cables connected well before installing the cover back

## 3. Rear Panel Instruction

The interfaces of the rear panel are for reference only.

## 4. Startup & Shutdown

### ► Startup

1) Connect the monitor and the power.

(2) The device will boot and the power indicator will display blue. (3) A wizard window will pop up.

### ► Shutdown

Go to "Main Menu" and then select "Shutdown" icon. This will bring up a shutdown window. The device will shut down by clicking "OK" button. Then disconnect the power.

## 5. Login

The default username is admin and the default password is 123456. You must configure the wizard if you start the NVR for the first time and you may change the password when you configure the wizard for the first time. You can skip the settings of wizard next time. Click "Start" and select "Login". This will take you to see a login box. Input default username and password you set and you can see the live image.

## 6. Network Configuration & Add IP Camera

After you finish adding IP cameras, you can see the live images through the monitor of the NVR. The following will mainly introduce how to add the IP cameras via LAN/WAN.

### ► LAN

(1) Set the network of the NVR. Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  TCP/IP. Input IP address, subnet mask, gateway, etc. If using DHCP, please enable DHCP in both the NVR and the router.

(2) Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  Port. Input HTTP port (the default value is 80), server port (the default port is 6036).

(3) The internal ethernet port is the port which connects all the PoE ports with the NVR system. The PoE ports are available if the internal ethernet port is online; if it is offline, all the PoE ports will be unavailable. The IP address and subnet mask of the internal ethernet port can be changed to make the port in the same network segment with the IP cameras which directly connect to the PoE ports of the NVR.

IP Address Se	ttings		
Ethernet Port 1	(Online)		
🔲 Obtain an If	Pv4 address automatically	Obtain an IPv6 address a	utomatically
Address	192.168. 1. 2	Address	
Subnet Mask	0.0.0.0	Mask Length 0	
Gateway	192.168.1.1	Gateway	
Internal Etherne	tPort (Online)		
Address	192.168. 1. 3	Address	
Subnet Mask	0.0.0.0	Mask Length 0	
мти	1500		
Obtain DNS	automatically		

(4) Go to Start  $\rightarrow$  Settings  $\rightarrow$  Camera  $\rightarrow$  Add Camera. The NVR will automatically refresh the cameras searched. The IPC which supports the Onvif protocol may be added manually. If the IPC searched is not in the same local network as the NVR, you should select the device and click I to modify the IP address.

HDD but not tighten them

⑤ Checkmark the device you want to add and then click "Add" button.The NVR will automatically refresh the cameras and return to "Edit Camera" interface. "Online" status means connecting the device successfully and you will see the live image. You may select the added device and click ■ button to modify channel, IP address, ect.

							-	learch Camera			<b>۹</b> -
	† Camera Name	Address	Port	Status	Protocol	Model	Preview	Operation	✓ Upgrade	~	Versio
	IP Camera 1	192.168.1.20		Online	xxx	xxx		۵ 🖈	t		4.1.0.0
2	IP Camera 2	192.168.1.38	80	Offline	xxx	xxx	o	🥏 🎬	Ť		4.1.0.0
	IP Camera 3	192.168.1.45	80	Online	xxx	xxx	•	i 🖉			

	Edit Camera X
Camera Name	IP Camera 1
Address	192.168. 1.58 Sync to IPC
Port	9008
Protocol	xxx ~
Model	xxx
Username	admin

	Display Password
	Test OK Cancel

#### ► WAN

(1) Set the network of the NVR. Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  PPPoE. Enable PPPoE and then input the user name and password received from your ISP.

(2) Go to Start  $\rightarrow$  Settings  $\rightarrow$  Camera. Click "Add Camera" or **H** behind the column of the search camera and select "Manually Add" to add the IP cameras. Input IP address, server port, username and password of the IP camera. The IP camera must be connected over WAN. And here the IP address of the IP camera must be a WAN IP address.

## 7. UPnP

You can use the UPnP function to enable the fast connection of the device to WAN via a router without port mapping.

(1) Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  UPnP, and enable UPnP and then click "Apply" button to save.

② Enable the UPnP function in the router.

🛃 Enable					
Мар Туре					
Port Type	External Port	External Address	Port	UPnP Status	Edit
HTTP Port		183.17.254.19	80	Valid UPnP	۵
Server Port	6036	183.17.254.19	6036	Valid UPnP	۶
RTSP Port	554		554	Invalid UPnP	۶

## 8. NAT

### ► NAT Settings

1 The NVR shall be powered on and connected to the network.

② Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  TCP/IP. You can obtain the IP address, subnet mask and gateway automatically. You can also manually enter them according to the actual network situation. Please make sure the network segment is the same as that of the network which is used.

③ Set the preferred or alternative DNS Server. Click "Apply" to save the parameters.

(a) Go to Start  $\rightarrow$  Settings  $\rightarrow$  Network  $\rightarrow$  NAT tab. Enable NAT and select the NAT Server Address (The default NAT Server Address is *nat.autonat.com*). Click "Apply" to save the parameters.

NAT		
Visit Address	www.autonat.com	
NAT Server Address	nat.autonat.com	
		Apply

### ► NAT Access

After finishing the NAT settings, you can input *www.autonat.com* in the IE address bar and then press enter to go to the following interface. If you are the first time to access the NAT, you shall download and install the ActiveX according to the popup tips. After installing ActiveX successfully, it will pop the login box.

	Enter device serial number
1	Enter Username
	Enter Password
_	
	Login

Device Serial Number: Click ■ on the menu bar at the bottom of the live interface to check the serial number or go to Start → Settings → Network → Network Status to check the serial number of the NVR).
Username: The username of the NVR. The default username is admin.
Password: The password of the NVR. The password is set by yourself when you configure the wizard for the first time.

## 9. Manual Recording

Before recording, please install and format a HDD. In the live interface you can see the menu toolbar. Click 🚉 button to start recording. Click it again to stop recording. You can also click 🗾 to check the status of the recording.

#### 

## 10. Playback

### ► Instant playback

Click "Instant Playback" in the right-click menu of the camera's preview window to select or drag the playback progress bar to change the playback time to play back the record.

### General playback

Click  $\bigcirc$  on the tool bar at the bottom of the live preview interface or click Start  $\rightarrow$  Playback to go to the playback interface as shown below. You can also add the playback cameras manually. Click  $\blacksquare$  in the playback window to pop up the "Add Camera" window. Check the cameras in the window and then click "Add" to add playback camera. The record files of the added playback camera will be played in the playback interface.
